Professional Summary

Software Engineer with experience since 2019 delivering backend services, full-stack web applications and enterprise integrations across insurance, financial systems and digital platforms. Experience includes leading a team of five developers, mentoring junior engineers, designing REST APIs, building payment microservices and improving application performance. Technical background spans Java, JavaScript, TypeScript, Python, Node.js, React, SQL and cloud technologies, alongside Guidewire ClaimCenter and Gosu. Combines feature development and business requirements analysis with code reviews, automated testing, CI/CD, production troubleshooting, legacy refactoring and technical debt management. Seeking Senior Software Engineer and Senior Developer roles across backend, full-stack and integration teams.

Technical Skills

Languages: Java, Gosu, JavaScript, TypeScript, Python, SQL, C/C++, C#

Backend and full stack: Node.js, Express.js, React, Next.js, Django, HTML, CSS, Tailwind CSS, EJS, microservices, authentication, API security

Databases: MSSQL, PostgreSQL, MongoDB, MySQL

Cloud and delivery: AWS, Microsoft Azure, Docker, Kubernetes, Terraform, Helm, Helmsman, CI/CD, Git/GitHub

Quality and practices: JUnit, Mockito, Cypress, Splunk, TDD, BDD, Agile/Scrum, SDLC, code reviews

Insurance and integration: Guidewire ClaimCenter, Gosu, FNOL, business rules, CE Digital, REST APIs, SOAP, JSON-RPC, Edge APIs, Azure APIs

AI development tools: AI-assisted development, Generative AI, prompt engineering, LLM-assisted development, AI code review and documentation

Professional Experience

Analyst Developer | Hastings Direct

Apr 2026 - Present

- Develop and maintain FNOL functionality in Guidewire ClaimCenter, implementing new features and business-required changes for digital claims processing.
- Build and support integrations between customer-facing mobile applications and Guidewire using REST APIs, Edge APIs and Azure API services.
- Implement and enhance Gosu business rules for claims validation and processing; use MSSQL to validate and transfer claims data across enterprise systems.
- Triage issues, investigate defects and support testing, deployment and production troubleshooting within an Agile insurance environment.
- Refactor legacy code and document technical debt arising from existing implementations and requirements to support future maintenance and improvement.
- Mentor and advise junior developers, providing guidance on implementation, debugging, testing and code maintainability.
- Collaborate across teams on CE Digital claims experiences, backend integrations and customer data synchronisation.

Software Engineer | Dreamlines GmbH

Dec 2021 - Apr 2026

- Spearheaded development of scalable web features, increasing delivery speed by 30%.
- Reduced API latency through database indexing and caching strategies.
- Built a fault-tolerant microservice for multi-channel payment processing.
- Led code reviews and mentored junior engineers to improve code quality and maintainability.
- Collaborated with UX designers on responsive interfaces and contributed to CI/CD pipelines and Agile delivery.

Software Engineer | AFPRINT

Nov 2020 - Dec 2021

- Led a team of five developers building a financial management platform.
- Designed and deployed RESTful APIs with a focus on availability and security.
- Applied test-driven development using JUnit and Cypress, expanding automated test coverage and reviewing code to improve reliability.
- Translated complex business requirements into user stories and application features.

Software Engineer | Alphamead Technologies

Jul 2019 - Sep 2020

- Developed a microservice supporting business process management systems.
- Built applications with Django and Java, including an electronic voting system.
- Created and tested a mock aptitude test application that simulated examination conditions.

Selected Projects

- Comment and Like System: Built nested replies with React, Node.js and PostgreSQL.
- Authentication System: Developed a secure, modular JWT-based authentication solution.
- Analytics Dashboard: Built a Streamlit and Python dashboard for real-time insights.
